Disaster Recovery-as-a-Service [DRaaS]

CARBON60
THE MANAGED CLOUD COMPANY

Have more control over your disaster recovery plan and faster failover with automated failover and failback.

Built on a Hosting platform with direct integration into Zerto's industry-leading replication software, Carbon60 DRaaS with Zerto offers increased flexibility, customized runbook functionality, optimized RPOs and near-zero RTOs.

Virtual Protection Group

Grouping and tiering VMs for protection ensures consistent recovery points (RPOs) across all grouped machines. Paired with right-order fidelity, applications will failover while maintaining data and application integrity.

Partial Failover

By grouping VMs supporting multi-tier applications, you can perform partial failovers within that group, reducing cost and simplifying failback.

DNS Failover

Easily manage your public IP blocks, DNS zones, records, and make updates to all your DNS records in the same location in the event of a failover.

Recovery Point Objectives (RPOs)

Define your own RPOs for your VMs with Carbon60 DRaaS. RPOs of seconds can be achieved with little impact on performance or resource usage of the primary system.

Automated Failover/Failback

Accelerate and automate the entire failover and failback process, reducing the errors of manual failback, lowering data loss, and ensuring data integrity.

Granular Restore

A checkpoint journal at the recovery site can store RPO points from between 1 – 720 hours, enabling restores to points prior to the disaster.

Zerto

The Carbon60 Advantage

Carbon60's success lies in our commitment to deliver reliable and flexible managed cloud solutions with the highest-level of accountability and service quality.

White-Glove Support

Exceptional service from the beginning. White glove onboarding ensures both you and the Carbon60 support team have a defined set of procedures in case of a recovery event.

DRaaS Specific SLA

We crafted an SLA specifically to address the complexities of DRaaS that a generic SLA wouldn't— because we know what business continuity means for you, your applications, and your revenue.

Secure Seeding

Our DRaaS system allows you to transfer large amounts of data to us with confidence that it's physically secured.

Managed Failover Tests

Testing your DR environment annually ensure everything is working in case of an emergency. Carbon60 engineers and operations staff will you're your team to test the recovery process according to the runbook.

Dedicated Disaster Recovery as a Service

Software Used
- ✓ Zerto

Included Services
- ✓ Service First Support
- ✓ White Glove On-boarding
- ✓ Managed Failover

Minimum Requirements
5 Compute Instances in Public Cloud, Hosting, or Dedicated Private Cloud

Pricing Model
Base Monthly Fee + Storage + Compute Resources
Compute can be full reservation or first come first serve

ABOUT CARBON60

Carbon60 is a managed cloud services provider for mid-market and enterprise customers. The company offers private, public and hybrid cloud services and a full suite of managed services including monitoring, performance optimization and testing, security, disaster recovery, backup and CDN services. Carbon60 is also the leading provider of application hosting for content management systems in Canada.
